

Tackling sustainability early in a project can provide insight and innovative advice on the issues that can result in achieving cost savings and efficiencies

## Why Choose Us?

DPP Sustainability works with clients to develop clear and effective energy and sustainability strategies. Early engagement means we can propose the best cost savings and reduce the energy demand to as low as is practicable ensuring later capital costs are minimised. A planning submission that demonstrates the consideration of environmental, energy / sustainability issues can reduce the burden of a section 106 requirement.

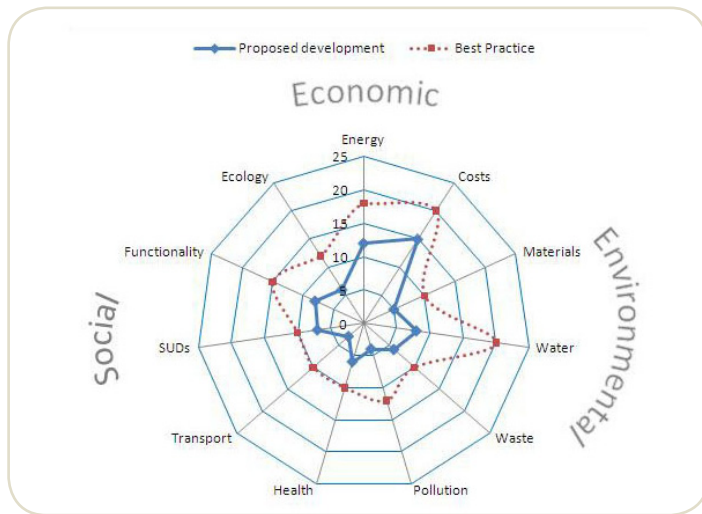

DPP Sustainability works with local planning authorities and developers providing independent and site specific advice. It is critical to consider the financial and technical viability of the range of renewable technologies and to provide supporting advice in a clear and jargon free way.

## Doing More

Organisations with strong corporate environmental strategies can benefit from financial savings, reduction in maintenance costs, a better working environment for staff and a raised profile in the community. We offer the following services:

- Corporate Social Responsibility
- Environmental Management Systems (EMS) and ISO 14001
- User Guides on building management sustainability and energy
- Services for assessment compliance or marketing needs.

## Meeting Industry Standards

We are able to advise on how best to gain compliance at both the pre and post planning stages of a development and use standard methodologies such as:

- Code for Sustainable Homes Assessments
- Building Regulations compliance
- On Construct Domestic Energy Assessments
- BREEAM for non domestic buildings

## Learning More

We are aware of the issues of localism and take this into account when advising on strategies. We offer opportunities tailored to your needs to help your staff become more aware of the ever changing sustainability agenda.

# Case Studies

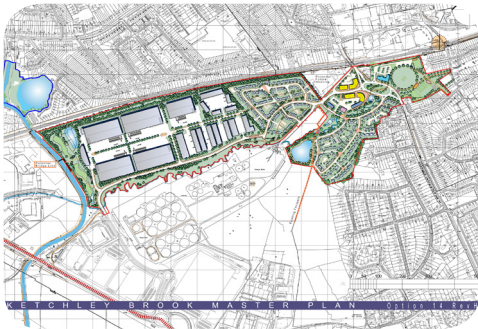

## 1. Lochialort Investment – Norton St Philip

- Mixed commercial and residential scheme for over 51 homes, including sheltered housing, shops and offices
- Code Level 3 assessment performed to inform the architectural design of the site and highlighted where sustainable measures could be incorporated
- Development incorporated Solar Water Heating and Ground Source Heat Pumps for the residential units

## 2. Taylor Wimpey – Park Prewett

- Mixed use development requiring Code 4 and BREEAM very good for 21 dwellings and the existing listed barn
- Strict energy targets met in line with the conservation requirements of the site
- Sustainability statement promoted the cumulative benefits in landscape, transport and materials

## 3. Goodman Logistics – Sketchley Brook

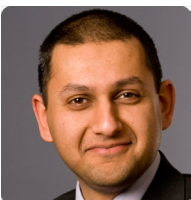

- Mixed use scheme of approximately 340 dwellings and 715,000 sqft of commercial space
- Energy strategy developed for the whole site incorporating a range of potential renewables
- Waste Management strategy developed

## 4. Irwin Mitchell – ISO14001

- Quick turnaround review of the EMS to ensure compliance with approaching ISO 14001 certification
- Updated legal and aspects registers, and streamlined procedures in line with culture
- Provided one day EMS training
